Agenda

Introduction

BI Needs & Retail Challenges

How IBM Cognos Solves the Problem

AI & Analytics Capabilities

Dashboard & Data Visualization Tools

Competitive Landscape

Case Studies

Recommendations & Conclusion

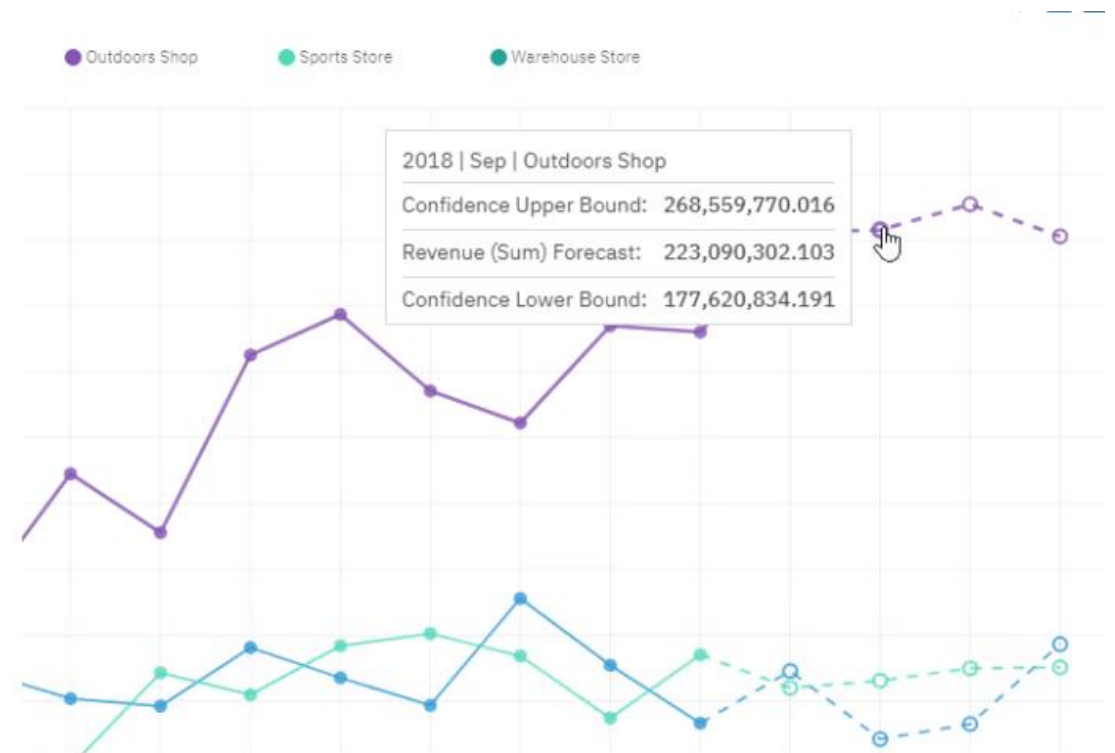

BI Needs & Retail Challenges

- Rapid retail changes demand real-time decisions
- BI transforms data into forecasting, inventory & customer insights
- Common issues: forecast errors (up to 30%), data silos, manual Excel
- Consequences: overstocks, stockouts, lost sales
- AI tools can cut inventory errors by 50%, boost sales 3–5%

How IBM Cognos Solves the Problem

- AI-driven forecasting & scenario planning
- Connects sales, inventory, marketing, supply chain data
- Self-service dashboards reduce IT dependency
- Delivers 77% ROI over 3 years (Forrester)
- \$1.1M efficiency gains, \$670K from retiring legacy tools

AI & Analytics Capabilities

AI Assistant answers plain-language questions instantly

Smart data discovery detects patterns & anomalies

Predictive models use historical + external data (seasonality, weather, promos)

“What-if” scenario modeling supports proactive decisions

Example: Novolex cut forecast time from weeks to hours

Dashboard & Data Visualization Tools

Dashboard & Data Visualization Tools

- Dashboards are a core BI feature for rapid decision-making
 - Quickly interpret complex data
 - Improve accuracy & efficiency of decisions
- Analytics-driven companies achieve better results
 - 1.5× more likely to see above-average growth
 - 5% higher return on sales (Hjelle et al., 2024)
- Visualization tools deliver significant competitive advantages

Turning Data into Actionable Insights

- IBM Cognos converts raw sales & inventory data into insights
 - Addresses costly overstocks & stockouts in retail
- Project dataset: Kaggle Warehouse & Retail Sales
- “Create from Existing Data” function
 - AI auto-builds dashboard in seconds
 - Selects relevant charts, KPIs, and comparisons

Create from existing data

Locate data sources in the Content view, and create content based on these sources.

Select one of the following content types to create from the uploaded files.

Recommended

Automatic dashboard

Automatically generate a dashboard to quickly visualize your data.

Insights in Assistant

Ask questions in your own words, and discover insights.

Other options

Blank dashboard

Create a dashboard layout without pre-populated visualizations.

Data module

Make meaningful connections between your data sources.

Exploration

Discover and analyze data in a flexible workspace.

Customization & Advanced Personalization

- Custom expressions & calculated fields
 - Create new measures, dimensions, KPIs
- Scenario-specific filters
 - Example: show only items with >10% sales deviation from forecast
- Flexible visualization formats
 - Bar, line, heat maps, KPI tiles, bubble charts, etc.

Quadrant

Forecasting & Insights

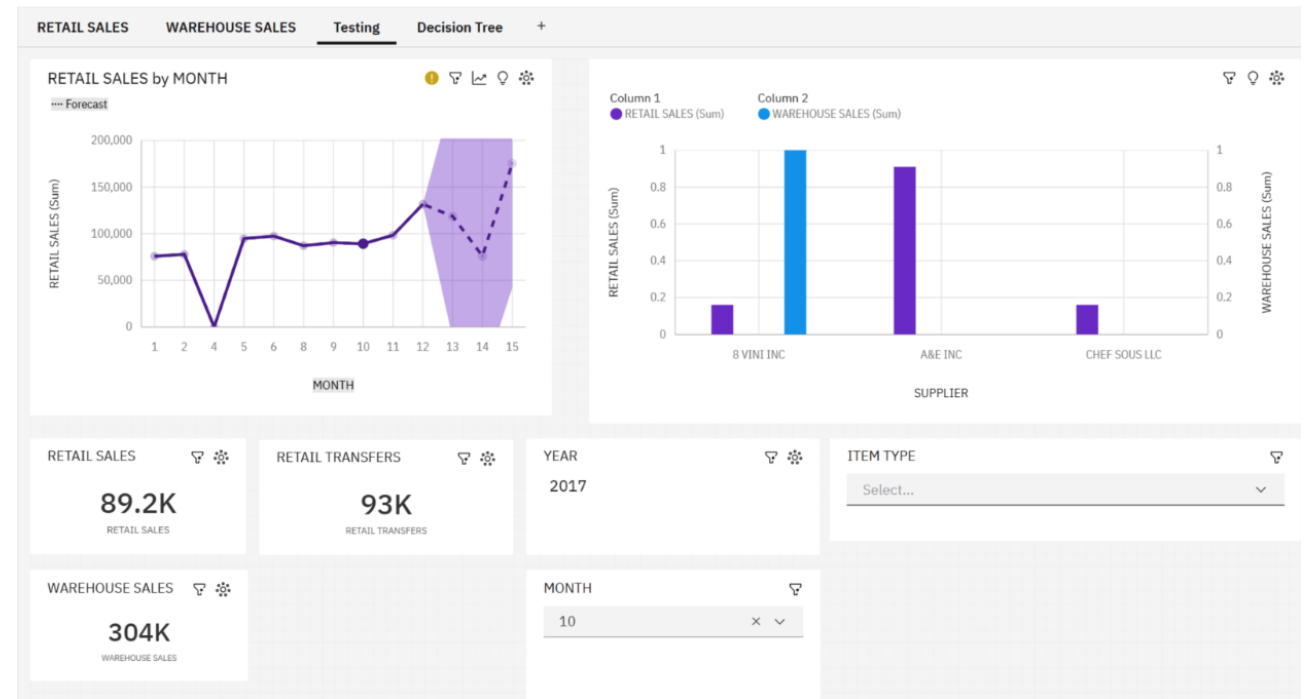

- Forecast tool projects monthly sales trends
 - Identifies seasonal peaks & risk periods
- Narrative Insights
 - AI-generated text summaries detect outliers & trends
- Filters for “All Tabs” and “Current Tab”
 - Drill into specific suppliers, item types, time periods
- Custom KPI charts
 - Compare warehouse transfers & retail sales over time

KPI Integration & Interactivity

- KPIs track performance vs. forecast in real time
 - SMART: Specific, Measurable, Attributable, Realistic, Time-bound
- Interactive dashboard elements
 - Filters, drop-down menus, drill-through navigation
- Example: supplier filter to compare transfers vs. sales

AI-Driven Narrative Insights

- Automatically highlights key changes in data
 - Example: Month 8 highest warehouse sales (382K+)
 - Example: Beer category sales surge from Month 4 to 5
- Flags anomalies early
 - Supports proactive adjustments in ordering & promotions
- Saves time on manual interpretation

Narrative insights

Favorite insights (0) ⓘ

Click the star icon for a suggested insight to add it as a favorite.

Suggested insights (10) ⓘ

MONTH 12 has the highest RETAIL SALES at nearly 132 thousand, followed by 11 at over 98 thousand.

☆

MONTH 4 has the lowest RETAIL SALES at 0.0, followed by 1 at 75791.77.

☆

From 4 to 5, ITEM TYPE LIQUOR's RETAIL SALES increased by 35,123.

☆

From 4 to 5, RETAIL SALES increased by 94,693.

☆

From 11 to 12, ITEM TYPE LIQUOR's RETAIL SALES increased by 39%.

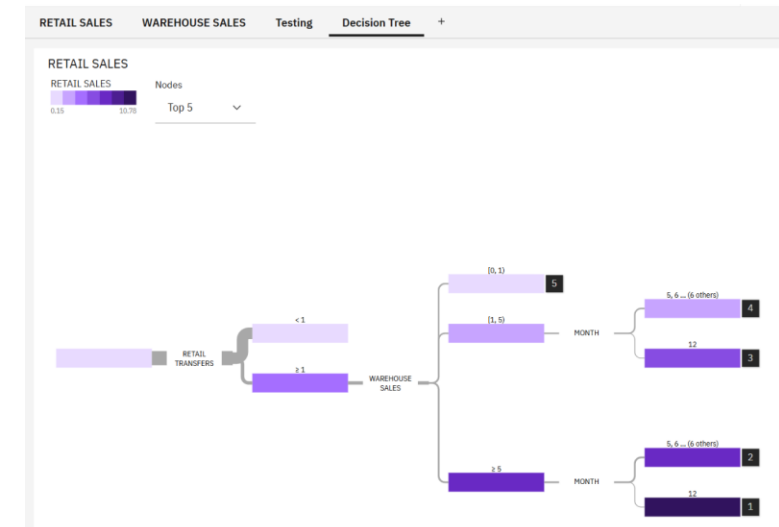

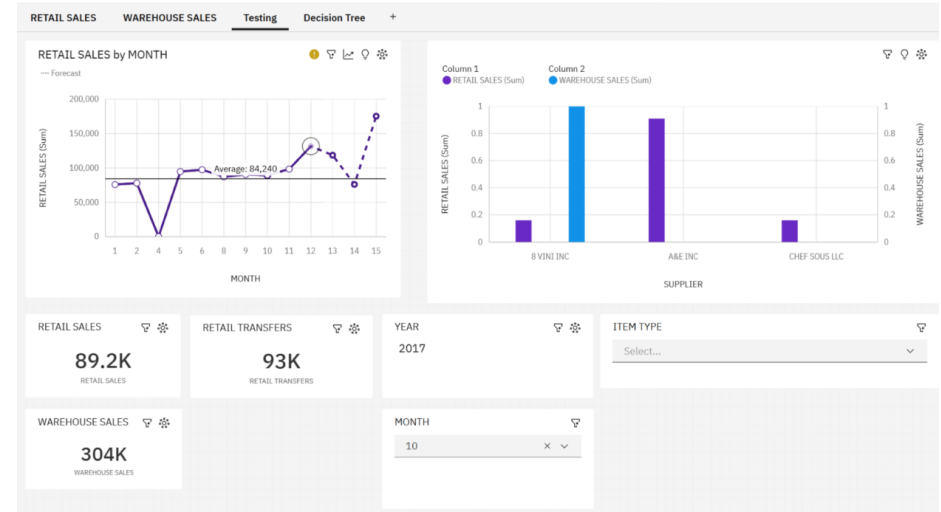

☆

From 11 to 12, RETAIL SALES increased by 34%.

☆

Decision Tree & Advanced Visuals

- Dashboard monitored retail sales, warehouse transfers, supplier performance
- AI-generated decision tree
 - Shows how transfers, warehouse sales, and months affect demand
- Advanced visual options for deeper insight
 - Heat maps, sunburst diagrams, waterfall charts, radar charts, word clouds

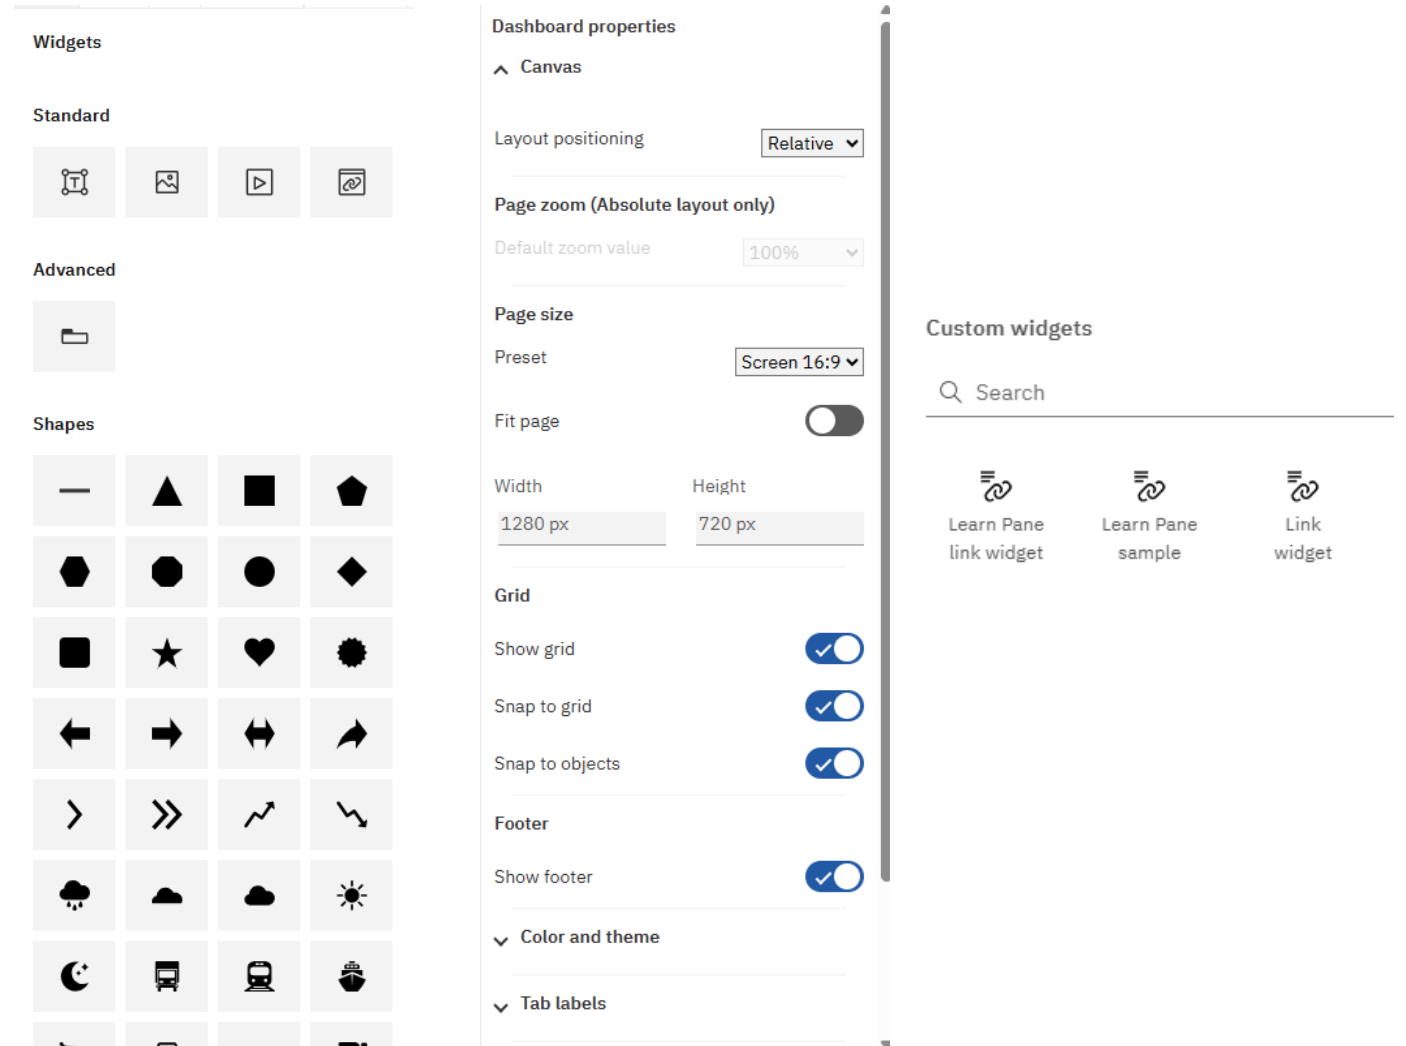

Visualizations

System	Custom				
 Area	 Bar	 Box plot	 Map	 Marimekko	 Network
 Bubble	 Bullet	 Column	 Packed bubble	 Pie	 Point
 Crosstab	 Data player	 Decision tree	 Radar	 Radial	 Scatter
 Driver analysis	 Drop-down list	 Dual-axis column	 Spiral	 Stacked bar	 Stacked column
 Dual-axis line	 Filter dropdown	 Heat map	 Summary	 Sunburst	 Table
 Hierarchy bubble	 KPI	 Legacy map	 Tornado	 Tree map	 Waterfall
 Line	 Line and column	 List	 Word cloud		

Widgets & Dashboard Properties

- **Regular widgets**
 - Images, videos, text boxes, shapes, containers, advanced elements
- **Custom widgets**
 - Specialized tools, external web content, unique visualizations
- **Properties panel**
 - Page size, layout, alignment, themes, color schemes, tab labels

Data Integration & Connectivity

- Integrates multiple data sources into one model
 - Warehouse, POS, supplier databases
- Eliminates silos → improves forecasting accuracy
- Calculated measures from multiple sources
 - Example: warehouse-to-retail ratio by supplier
- Dynamic filters
 - Updates metrics instantly across all visuals

Experience & Customization Options

- Focus on usability, simplicity, clarity
 - Critical for SMEs
- Affordable, intuitive interface
 - 63% say Cognos supports financial decisions
 - 66% value data visualization (Magoma et al., 2021)
- Custom layouts & themes
 - Interactive filters, synchronized across visuals
- Calculated fields for dynamic updates

Summary of Features

IBM Cognos = dynamic decision-support system

Combines forecasting, AI insights, multiple visualization formats

Enables timely, confident decisions

Reduces forecasting errors & optimizes inventory

Competitive Landscape, Strengths, Case Studies, and Recommendations

Competitive Landscape

Competitors: Power BI, Tableau, Qlik Sense, SAP Analytics Cloud, Looker

Cognos strengths: AI-driven insights, scalability, governance

Each tool has unique strengths & limitations

Feature Comparison Highlights

- **Cognos:** Built-in AI Assistant, advanced forecasting, 100+ data connectors, enterprise security
- **Power BI:** Low cost, Microsoft ecosystem
- **Tableau:** Visualization & storytelling leader
- **Qlik Sense:** Associative data model, predictive modeling

Strengths of Cognos

- **AI insights** for non-technical users (e.g., hospital network queries)
- **Scalability:** suitable for SMEs & global enterprises
- **Flexible deployment:** cloud, on-prem, hybrid
- Strong security & compliance features

Weaknesses of Cognos

Higher starting cost
than Power BI

Less visual creativity
than Tableau

Smaller community
than Microsoft tools

Platform	Strengths	Limitations	Example Use Case
Microsoft Power BI	Affordable, strong Microsoft integration, user-friendly	Limited with large datasets; advanced AI features cost extra	Small bakery using Microsoft 365 for sales dashboards
Tableau	Best-in-class visualizations, strong storytelling	Expensive, steep learning curve	Marketing agency creating interactive client visuals
Qlik Sense	Associative data model, flexible analysis	Complex for beginners, performance with big datasets	Logistics firm optimizing delivery routes
SAP Analytics Cloud	Integrated BI, planning, and predictive analytics	Less value outside SAP ecosystem; higher cost	Manufacturing firm with SAP ERP for inventory planning
Looker (Google Cloud)	Embedded analytics, centralized data modeling	Requires SQL skills; high licensing cost	E-commerce company embedding dashboards into apps

Case Study 1 – European Supermarket Chain

- **Challenge:** Forecasting demand accurately
- **Solution:** Integrated POS & warehouse data with ML
- **Result:** 33% error reduction, €170M annual savings

Case Study 2 – Global Manufacturing Company

- **Challenge:** Data scattered across 20 ERP systems
- **Solution:** Centralized reporting hub with Cognos
- **Result:** Reporting time cut from 2 weeks to 2 days; downtime reduced by 15%

Case Study 3 – Local Retail Store Chain

- **Challenge:** No real-time inventory insight
- **Solution:** Dashboards for daily sales & inventory
- **Result:** 8% profit increase in 3 months

Recommendations

Start	Start small, scale later
Use	Use correct license per role
Integrate	Integrate all key data sources
Train	Train staff on AI insights

Conclusion

Cognos: More than BI—
predictive & governance tool

Ideal for compliance-heavy
industries

Strategic choice despite
higher cost

Thank you
